# CBM-VET PROJECT

### Technical visit in Madeira

In recent months, we have had the privilege of gaining a deeper insight into Madeira's fisheries and logistics sector through our two-day technical visit, within the framework of the CBM-VET project. Here are some of the highlights:

#### Day 1:

- Funchal fish market: we explore the efficient fish reception and distribution operations.
- Fishing vessel: We reviewed the safety conditions on board, essential to meet the challenges of deep-sea fishing.
- Regional Civil Protection Service, IP-RAM: We were impressed by the advanced training techniques and fire-fighting drills.
- Vidinha Group factory: We observed the rigorous process from reception to distribution of the fish, with special attention to food safety.

#### Day 2:

- Mercado dos Lavradores: We detail the organisation and facilities of the fish selling area.
- Instituto Profissional de Transportes e Logística (IPTL): We explored the facilities where practical modules of professional courses are taught, integrating education and practice.
- Workshop on ISO quality: We participated in a workshop that delved into the standards that improve our processes and services.
- Closing and planning: We concluded with a closing meeting and planning for the final event in Sao Tome and Principe.

**We thank all participants for sharing their knowledge and experiences. We remain committed to continuous learning and collaboration to strengthen our capacities and contribute to the sustainable development of the sector.**

## Learning platform

Continuing with the established plan, the learning platform is now available. The beneficiary groups in Sao Tome will be able to receive all this training online.

### Programmed activities:

#### Digital:

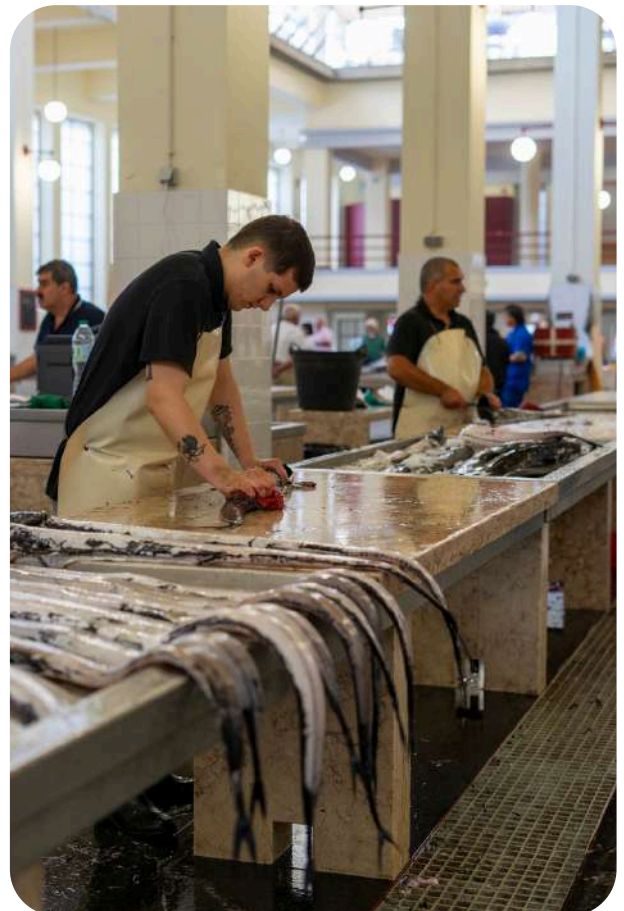

- Completion of a digital competences diagnostic questionnaire by all trainers/teachers of the participating organisations.
- Training in 'Content production for WEB communication: websites, blogs and social networks'.
- Training in digital marketing techniques and social network management.
- Training in e-mail management and searching for information on the web.
- Training in 'Distance training: resources and platforms'.

#### Green:

- Training 'Environmental management on board'.

#### Transversal competences and pedagogical area:

- Construction and implementation of two training plans, one in the machinery area and one in the deck area, adapted to local training needs.

## 2ND NEWSLETTER

In addition, on the website you can find up to 5 deliverables that show the whole process of the CBM-VET project.
